MISCELLANEOUS.

Handling - Handling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma, overheating, excessive cooling, behavioral stress, physical harm, or unnecessary discomfort.

On July 1, 2011 a quad caging system containing a USDA covered species was changed out and the animals housed in the unit were transferred to a new clean quad cage. The dirty quad cage unit was then moved to the cage wash room for sanitization. Following the completion of the sanitization cycle, the quad cage unit was removed from the cage washer. It was at that time that personnel discovered one animal on the floor inside one of the enclosures in the quad cage unit. The failure of personnel to remove an animal from a primary enclosure prior to cleaning in a mechanical cage washer has direct and adverse effects on the health and well being of the animal. The IACUC has implemented SOP's and additional training procedures as part of corrective action and prevention of future occurrences.

*****Correct immediately

This was a focused inspection of the (b)(7)(f) site located in Pennington, NJ.

An exit interview was conducted with the facility representatives.
